USER MANUAL

Congratulations,

on becoming an owner of a DUNA TAKTUS watch. Please read the guide before use.

Display & handling

- A – hour hand
- B – minute hand
- C – second hand
- D – crown

Winding

This automatic watch can also be wound up by the crown (D). In position 1 turn the crown 20 times clockwise until the second hand starts to move continuously. To reach full power reserve, you need to turn the crown 40 times.

Time setting

Pull out the crown (D) into position (2). To set the hands of the watch turn the crown. After setting the time, push the crown back to position (1). The watch is not waterproof if the crown is in position (2).

Usage

The watch is waterproof up to 5 ATM so it can be worn while washing hands, taking a shower, it is sweat, condensation and rain proof. It cannot be worn while swimming, scuba diving, doing watersports or sauna. The watch is suitable for general, everyday usage. The watch cannot be used in extreme circumstances where there is a possibility of a strong blow or when the water pressure or temperature constantly change. In humid conditions the lifespan of the leather strap can decrease.

Maintenance

To clean the watch use clean water and a dry, soft cloth. Do not use detergents or chemicals. To maintain water resistance the sealings need to be checked yearly at specialized service. The efficiency of the lubricant used in the mechanism of the watch decreases with time which can result in inaccurate operation of the watch. The periodic maintenance of the watch is due every 5 years at specialized service.
